

Magnetic Shielding Mesh

Magnetic shielding mesh is produced using the excellent quality EMI and RFI shielding materials such as Mu Metal, Copper, Stainless Steel and Silver. Recommended for use in the low intensity magnetic fields that demand high attenuation, great initial permeability as well as extensive shielding properties.

Our mesh is produced into diverse weaving styles ensuring durability and high shielding performance. Available in the wide range of mesh specifications as well as individual size requirements are also fulfilled.

Magnetic Shielding Mesh Applications

Microwave and electric field shielding, radiofrequency shielding, faraday cages, Window screening, electronic gadget, Electric devices, clothing, bedding.
