

## Mini Expanded Metal

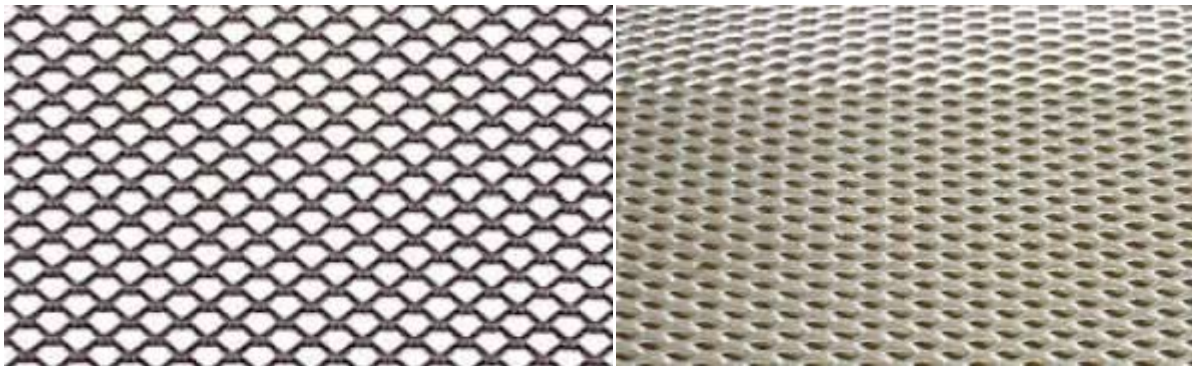

Mini expanded metal is made from a metallic sheet material in a way that every panel is a regular component without welding or weaving the connection points. It is an extremely durable and resistant form of protective mesh providing prolong service life and significant role in the extensive applications.

### Mini Expanded Metal Characteristics

1. Prolong service life
2. Corrosion and erosion resistant
3. Thick wire diameter
4. Economical and durable
5. Small wind resistance
6. Ventilation

### Mini Expanded Metal Applications

Construction	Machine security guards	Flooring and stair treads in the industrial units
Poultry farm and zoo fencing	Ramps	Walkways
Architecture panels	Gratings	Railings
Stairs	Window security	Vents
Anti-dazzle screens	Enclosures	Dryers
Filters	Reinforcement mesh	Catwalks

Hole patterns: Decorative, standards, flattened, square and hexagonal
